

COVID-19

Emergency Solution for your Department's **Remote Working**

- ✓ Enable your staff to work from home with our quickly-implemented, secure and proven service.
- ✓ Resolve existing issues of legacy VPN capacity problems.

Executive Briefing

One of the largest problems with the reaction to COVID-19 is staff being unable to connect to corporate services due to an overloaded remote access infrastructure. This document outlines how Visionist can provide same-day resolution by re-routing remote access to a **completely cloud-based**, secured to **OFFICIAL**, service. This includes a **SENSITIVE** handling caveat.

The Visionist Service has been in live operation within Government Departments for tens of thousands of users for over 18 months. It is fully accredited and follows **NCSC Best Practice Guidelines** for **Zero Trust Networking**. Our service will provide you with practical benefits and the necessary steps to deliver secure remote access to a dispersed population of users under stressed conditions.

Immediate Benefits of the Emergency Business Continuity Fix by Visionist

- ✓ Minimise Impact of COVID-19
- ✓ Rapid Business Continuity Improvements
- ✓ Scalable Cloud Architecture
- ✓ Safe and Secure
- ✓ Simplicity for Users

What Does The Service Do?

Proving the GDS mantra of 'The Internet is OK', Visionist will configure our cloud-based service to broker connections between your user devices and corporate web applications. **This will allow your users to work remotely, using their own devices in a secure manner.**

Whilst the pressure is eased on your legacy VPN bottlenecks, we will work with your IT teams to deploy a package to the corporate devices which will provide an improved user experience which follows the **NCSC's Best Practice Guidelines** for **Zero Trust Networking**.

The service operates a multi-tenant Global cloud with capacity to support a **rapid influx of users** and being cloud-based, is infinitely scalable.

This is ready to consume **NOW**, without any intervention on your part or need for us to 'build' anything specifically for you. As COVID-19 continues to affect businesses across the UK, Visionist is positioned to provide fast and reliable solutions for your business operability.

How Long Will It take?

Day 1 - 2: Emergency Fix

Our solution enables User access to corporate web applications from personal devices, meaning that your employees at home will be able to use their home systems. They will be given secure application access with security policies aligned to NCSC Best Practice Guidelines.

Day 1 - 5: Strategy Fix

While the emergency fix is implemented and the strain on the legacy VPN infrastructure eases, we will deploy a package to trusted end user devices. This will use existing mechanisms to re-route user traffic via the internet and avoid VPN bottlenecks.

Our service is designed for a number of user scenarios and can be easily installed to provide access on IOS, Android, Windows and Mac machines.
